- 

## ACADEMIC PROJECTS

### Introduction to Information Systems: *Mobile Application Design Document*

- Responsible for conducting market research leading to the creation of an effective business plan describing business case for a new mobile application designed to create a fully interactive metropolitan train system. Utilized a standard Software Development Life Cycle methodology to ensure an organized approach for a successful project outcome.
- Successfully defined the product's detailed data requirements, and modeled the relationships among data entities, and attributes. Effectively created and compiled design wireframes for presentation to potential investors.

### Data Management: *App development for local transportation system*

Spring 2022

- Analyzed information requirements for a local business, created a data model to support strategic decision making, and presented an analytics strategy with sample SQL queries to improve business effectiveness.
-
